

Directions:

Write a named function expression that stores the function in a variable called **cry** and returns "boohoo!". Don't forget to call the function using the variable name, not the function name:

```
cry();
```

Returns: boohoo!

Solution:

```
/*  
 * Programming Quiz: Cry (5-5)  
 */  
  
// your code goes here  
  
var cry = function crier(){  
  var myCry = "boohoo!";  
  
  return myCry;  
};  
  
console.log(cry());
```
